

Super T Spraying Option

Super T Spraying option is used on the Super cart Spray System to apply coating to ductwork from 20" to 36" high.

Features & Benefits

- Applying coatings to mechanical insulation used in ductwork extends the life of that system, a definite advantage over the cost of replacing ductwork. It locks down any remaining loose fibers after cleaning, provides a much more durable air stream surface and provides a surface that is more resistant to the accumulation of dirt, moisture and other contaminants.
- The Super T Spraying option lets you apply coating to ductwork from 20" to 36" high.
- The spray tips swivel so you can adjust the spray pattern to best fit your application.
- You make one pass to coat the two sides and then rotate the assembly to spray the top/bottom of the duct.
- The (4) guide legs let you position the cart body from 10" to 15" off the bottom surface in 1" increments.

Specifications

1-CSS20	Super T Spraying Option	Contact factory
	(1) T assembly	for current
	(4) 10" to 15" guide legs	pricing
