Call 770-266-6615 today, to find out more about improving your indoor air quality!

Q. Can air duct cleaning improve your indoor air quality?

A. Yes, by removing dirt, debris & other contaminants.

Did You Know?

The air we breathe indoors has become an increasingly important environmental concern. Since most people spend between 60% and 90% of their time indoors the following facts are cause for concern.

- **50% of all illnesses are either caused by or aggravated by polluted indoor air.** (American College of Allergists)
- **Children and the elderly are more likely to be affected by polluted indoor air.** (Department of Consumer Affairs)
- **1 out of 6 people who suffer from allergies do so because of the direct relationship to fungi and bacteria in the duct systems.** (Better Health Magazine)
- **The average 6 room house collects 40 pounds of dust each year.** (Discover Magazine).
- **Indoor air has been found to be up to 70 times more polluted than outdoor air.** (USEPA)

Do You have an IAQ problem?

Your heating and air conditioning system is much like your lungs. It brings in air, conditions and/or filters it, and then distributes it to where it is needed. When it becomes dirty or contaminated it should be cleaned so it can breath normally and efficiently.

If you answer yes to any of these questions it may be time to have your air duct system cleaned by a professional.

- Does anyone in your home have allergies, asthma, or other respiratory problems?
- Does anyone in your home experience headaches, nausea, burning sensations in the nose, throat or eyes when inside the home?
- Is there a smoker in the home?
- Do you have dogs, cats or other pets?
- Do you notice any odors when the furnace or air conditioner runs?
- Do you see dust on your furniture shortly after you have cleaned?
- Do you think there is not enough air flow coming through your vents?
- Does your furnace use only a standard throw-away fiberglass filter?

Benefits of Air Duct Cleaning!

An initial inspection of your duct system by a professional will help you to determine if you need your air ducts cleaned.

The primary benefit of cleaning your heating and air conditioning system is the source removal of the accumulated dirt, debris and other contaminants. If the accumulated dirt and debris is combined with enough moisture your duct system can become a breeding ground for mold spores, bacteria, fungus, mildew and other microbes.

By controlling (removing) the food source (dirt and debris) you have drastically reduce the likelihood of microbial contamination and the associated adverse health affects. If needed your professional air duct cleaning contractor can apply a sanitizer to further help reduce microbial contamination.

Common sense tell us that any mechanical system will run more efficiently (reducing energy consumption) if it the unit is clean verse dirty.
